

1 cm=10 mm

Ring Size Guide (to scale)

Remember the fingers on your dominant hand are typically around one half size larger, so it is important to measure the exact finger you want your ring to fit. Also keep in mind that warm fingers tend to swell. If you are between sizes, it is recommended to size up so that the ring will comfortably fit over the knuckle. The rings are thicker bands and fit small, if you do not want the ring to fit snug, I recommend sizing up one half size.

How to find your size:

Step 1- Cut a thin strip of paper (avoid using string or ribbon).

Step 2- Wrap the paper around the base of your finger, and mark where the paper overlaps.

Step 3- Measure the length in millimeters.

Step 4- Use a calculator to divide the length you measured by 3.14. That number will correspond with a ring shown above. (For example, your finger measures 53mm. Divide this number by 3.14 to get 16.9mm which is equal to size 7.)

Already have a comfortable fitting ring, but don't know what size? Place your ring on this printable chart. The ring should cover the line so that the outside of the circle touches the inside of your ring.
